

Chapter 5

Applications in integration

5.2 Volumes

SOLIDS OF REVOLUTION.

$$f(x) = \sqrt{x}$$

- Consider the region enclosed by

$$x = 0 \quad , \quad x = 1 \quad ,$$

$$y = 0 \quad \text{and} \quad y = \sqrt{x}$$

- Rotate the region about one of the axis.

- About x-axis

- About y-axis

Example.

Rotate the region enclosed by $y = x$, $y = 1$, $x = 0$ about the y -axis.

① 2D picture

rotate.

VOLUME OF SOLIDS OF REVOLUTION.

Rotation about the x-axis.

- Divide into subintervals.
- Create rectangles.
- Rotate those rectangles.
- Generate small cylinders

Typical cylinder:

- Radius: \sqrt{x} ($f(x)$)
- Height: $\Delta x \rightarrow dx$

Volume of typical cylinder:

$$\begin{aligned} V &= \pi (\sqrt{x})^2 dx \\ &= \pi (\text{radius})^2 dx \end{aligned} \quad \rightarrow \quad V(\text{Solid}) = \int_0^1 \pi (\sqrt{x})^2 dx$$

$$\text{Vol(Solid)} = \int_a^b \pi (\text{radius})^2 dx$$

EXAMPLE 2 Find the volume of the solid obtained by rotating about the x -axis the region under the curve $y = \sqrt{x}$ from 0 to 1. Illustrate the definition of volume by sketching a typical approximating cylinder.

SKETCH

$$\begin{aligned} \text{Vol}(\text{Solid}) &= \int_0^1 \pi (\text{radius})^2 dx \\ &= \int_0^1 \pi x dx \\ &= \boxed{\frac{\pi}{2}} \end{aligned}$$

Rotation around the y-axis.

$$\text{Vol}(\text{Solid}) = \int_a^b \pi(\text{radius})^2 dy$$

EXAMPLE 3 Find the volume of the solid obtained by rotating the region bounded by $y = x^3$, $y = 8$, and $x = 0$ about the y-axis.

① Picture.

② Volume

$$\text{Vol}(\text{Solid}) = \int_0^8 \pi (\text{radius})^2 \text{height}$$

$$= \int_0^8 \pi (\text{radius})^2 dy$$

$$= \int_0^8 \pi x^2 dy$$

$$= \int_0^8 \pi y^{2/3} dy$$

$$= \boxed{\frac{96\pi}{5}}$$

$$\begin{aligned} y &= x^3 \\ \Rightarrow y^{1/3} &= x \end{aligned}$$

Cross-section as a washer.

Rotation about
x-axis

$$\text{Vol}(\text{Solid}) = \int_a^b \pi(r_{\text{out}}^2 - r_{\text{in}}^2) dx$$

Rotation about
y-axis

$$\text{Vol}(\text{Solid}) = \int_a^b \pi(r_{\text{out}}^2 - r_{\text{in}}^2) dy$$

EXAMPLE 4 The region \mathcal{R} enclosed by the curves $y = x$ and $y = x^2$ is rotated about the x -axis. Find the volume of the resulting solid.
